Resources and Tips for Working with American Indians and Alaskan Natives

How to Use Resources & Tips
Resources & Tips guides public health nutrition professionals to programs and resources for the American Indian and Alaskan Native (AI/AN) populations.

What you will find
On the first three pages, you’ll find background, history, insight, cultural considerations and some general information about AI/AN populations and their foods. These are followed by 9 categories of specific resources.

- Cultural Competency Trainings & References
- Reviews of Health Projects with American Indians
- Seeds, Gardening, Ethnobotany, Agriculture Products
- Specific Tribal or Regional Resources
- Consumer Resources
- Professional Resources
- Higher Education Resources
- Museums with American Indian Resources
- Key partners

Target Population: American Indian and Alaskan Native nutritionists and others who provide nutrition education in AI/AN communities.

Background: Over generations and through many cultures, the collection, cultivation and preparation of native foods supported populations throughout the hemisphere. These foods, five featured in the lovely Crops of the Americas* postal stamps and four in the Fruit Berries** shown on these pages, continue to flavor traditional and new recipes throughout the world. Evolving and tasty, these foods symbolize the heritage and wisdom of a region and offer color and flavor as well as nutrition. Corn became a staple food for millions and beans added still another rich plant protein to human diets. The squash, melons, chili peppers and sunflowers harvested and eaten throughout the world illustrate the culinary bounty provided to others by AI/AN. In the Resource Section of this document, are references to the trends that support sustainable agriculture, strong local economies and connections between growers, consumers and healthy foods. The heritage and traditions of American Indians offer much to those who recognize that food is more than nutrition; that food is part of the system that supports both individual and community life.

* Illustrations are from the “Crops of the Americas” United States postage stamps, issued in 2006, illustrated by artist Steve Buchanan. ** Fruit Berries Definitive Stamp designed by Howard Paine and illustrated by Ned Seidler and issued in 1999. See the consumer resource section for ordering stamps and related educational materials available from the United States Postal Service.
**General Suggestions:** This document has a variety of resources to learn more about particular regions and their traditional foods. Most American Indians and Native Alaskans are the experts in their own history and traditions and understand information in the context of their culture. People want to see a member of their own community. A knowledgeable and respected AI/AN person will be able to navigate the details of vocabulary and eating variables. Would anyone risk a new food taste recommended by a stranger? A person familiar with the place and time and age group may recognize the realities related to food choices. Lack of a reliable, safe water supply and easy access to soda pop is not really a fair choice, but it may be a reality unknown to a stranger. Costs and availability may be related to choices in the past that have become habits of today or they may remain significant concerns that would not be shared with a stranger. These resources showcase positive images and inspirational stories. There is no excuse for nutrition education materials that use hurtful stereotypes, when people from cultures that value dignity and beauty have already produced respectful materials.

**History:** Grounded in international law and the United States Constitution, tribal sovereignty is the principle that AI/AN's have inherent rights to be governed by their own laws - to the exclusion of state and local but not federal authority. It extends to some off-reservation rights such as hunting, fishing and gathering. (1) Rickert, Eve, "Raising the bar for lawyers" High Country News, Vol 39, No 17, p 10, September 17, 2007.

Traditional Indian health care practices and the western-model Indian health care system exist within a complex legal and historical framework. Basic principles of federal Indian law include: (1) tribes retain all of their inherent sovereignty that the federal government has not encroached upon; (2) the federal government, and not states, is in charge of Indian affairs; (3) the federal government only deals with tribal organizations or governments that it has recognized; and (4) the United States has assumed a trust responsibility towards Indian nations resulting from treaty language and the role it has assumed with respect to limiting tribal sovereignty. This "trust responsibility" is the obligation to provide healthcare to American Indian and Alaskan Natives. It underlies the activities of the Indian Health Service and the system of hospitals, clinics, field stations and other programs. The legal and historical background of the current system reflects pendulum shifts between U.S. policy preferences for assimilation or for self-determination of Indian people. (2) Shelton, Brett Lee, Legal and Historical Roots of Health Care for American Indians and Alaska Natives in the United States, an Issue Brief for the Henry J. Kaiser Family Foundation, pps 1 - 5, February, 2004. Website with document www.kff.org
There are about 4.3 million people or 1.5% of the total U.S. population, who identify themselves as American Indian or Alaskan Native. Less than 10% of all American Indian tribal groups are 65 and older. About 1/3 of American Indians and Alaskan Natives are under 18 years old. (3) *We the People: American Indians and Alaskan Natives in the United States, Census 2000*, US Census Bureau, issued February, 2006.

There are over 565 federally recognized tribes and more than 100 state recognized tribes. There are also tribes that are not state or federally recognized. Approximately 36% of the population eligible for Indian Health Services live outside of areas where this delivery system is available. Studies on the urban American Indian and Alaska Native population document poor health and limited health care options. (4) *American Indian/Alaska Native Profile, The Office of Minority Health, U.S> Department of Health and Human Services* [http://www.omhrc.gov/templates/browse.aspx?lvl=2&lvlID=53](http://www.omhrc.gov/templates/browse.aspx?lvl=2&lvlID=53) accessed October 23, 2007.

Safe and adequate water supply and waste disposal facilities are lacking in approximately 12% of American Indian and Alaska Native homes, compared to 1% of the homes for the U.S. general population (5) *Facts on Indian Health Disparities*, Indian Health Service, January, 2006 (website: [http://info.ihs.gov/Files/DisparitiesFacts-Jan2006.pdf](http://info.ihs.gov/Files/DisparitiesFacts-Jan2006.pdf)). This shockingly sad statistic contributes to the considerations of growing, safely preparing and preserving fruits and vegetables.

Native Americans have contributed significantly to the knowledge base about underlying biological issues for both diabetes and heart disease. Public health personnel as well as clinicians throughout the world benefit from this research. The Resource Section of this document has references to several important prospective epidemiological health studies from which priceless data may emerge for the obesity, diabetes and cardiovascular diseases which are now increasing rapidly throughout the world. A thorough review of literature related to obesity prevalence, consequences, contributing factors, intervention, and directions for future research has been recently published and is available on-line. (6) *Obesity and American Indians/Alaskan Natives*, prepared by Peggy Halpern, Ph.D, U.S. Department of Health and Human Services, April, 2007, [http://aspe.hhs.gov/hsp/07/AI-AN-obesity](http://aspe.hhs.gov/hsp/07/AI-AN-obesity).

American Indians have the highest per capita military participation rate, compared to any other major racial or ethnic group. (7) Huyers, Kimberly. "Socioeconomic Achievement
http://www.allacademic.com/meta/p103768_index.html Opportunities to honor veterans are important occasions. Healthy food, including traditional crops and ceremonial foods, may be at these events.

<tr>
<td><strong>Pathways Curriculum Materials</strong></td>
<td>Pathways was an obesity prevention study on American Indian children in grades 3 – 5. It has parental involvement activities, physical education, and a food service program. Pathways developed the program to be appropriate and appealing to American Indian children. The materials are very user-friendly and may be modified for use by other communities in addition to American Indian communities. Tips for classroom management particularly practical and positive! Check the website to learn more about the symbols in the project logo!</td>
<td>The materials are described in detail and can be downloaded from the University of New Mexico Web site <a href="http://hsc.unm.edu/pathways/">http://hsc.unm.edu/pathways/</a>. Contact: Dr. Sally Davis, Director/Principal Investigator UNM/CHPDP/Pathways MSC 11 6145 1 University of New Mexico Albuquerque, New Mexico 87131 505-272-4462 <a href="mailto:smdavis@unm.edu">smdavis@unm.edu</a></td>
</tr>
<tr>
<td><strong>Diabetes Prevention Program (DPP)</strong></td>
<td>The Diabetes Prevention Program was a 27 center randomized clinical trial that studied more than 3,200 adults at increased risk of type 2 diabetes; 5% of participants were American Indian. Results showed that lifestyle changes reduced the risk of development of Type 2 diabetes by 58% and was effective for all ages and ethnic groups. Study done on those 25 years and older, but results indicate prevention with healthy diet and physical activity needed for youth.</td>
<td>Knowler, WC, Barrett-Connor E, Fowler SE, et al, “Reduction in the incidence of type 2 diabetes with lifestyle intervention or metformin” <em>N Engl J Med</em> 2002 Feb 7; 346 (6):393-403 Click on the map nearest an area of service at <a href="http://www.cdc.gov/diabetes/states/index.htm">http://www.cdc.gov/diabetes/states/index.htm</a> Find additional materials from 59 state and territorial Diabetes Prevention and Control Programs (DPCPs) with commitments to improve health and quality of life for all people with diabetes.</td>
</tr>
</tbody>
</table>
Strong Heart Study

Study of cardiovascular disease and its risk factors among American Indian men and women, since 1988. Study includes three major geographic areas and about 4,500 participants. Study has had several phases, most recently focused on genetic epidemiology to investigate the heritability of CVD and localize genes that contribute to CVD risk. Descriptions of this study are very technical and not directly helpful for developing patient education materials.

Genetics of Coronary Artery Disease in Alaskan Natives (GOCADAN) Study

Longitudinal, population-based study to investigate genetic determinants of cardiovascular disease and risk factors in Alaskan Natives. This study provided extensive information about dietary intakes of a population different from non-natives, including 6 times more fish intake.

https://www.sfbr.org/gocadan.secure/index.html

The website has practical information which promotes traditional foods with a comparison to non-native foods, such as the value of willow shoots compared to iceberg lettuce. Look under “Resources for Our Community”. This website also has a clear and accurate primer on genetics, an interesting concept, often difficult to explain.

Note this server is powered by the wind! |
| Internet database of plants used as drugs, foods, dyes, fiber, ceremonial and other uses by natives Peoples of North America  
*Native American Ethnobotany*, by Daniel Moerman, published by Timber Press, Portland, Oregon, 1998 | This site is most useful if one has a common name or the scientific name of a particular plant; when entered into the search window, a list of publications that document the use of the plant by native people will show a short summary and provide a link to the USDA data bank for plants. Pictures, range maps and endangered status can be found on that site.  
The information from the databank was published in the 1998 reference book. More than 4,000 species are included with extensive cross references. Several book reviews listed this as the single, most inclusive reference on the topic, but noted that other resources are needed for pictures; therefore the combination of the book and the website with links to the USDA plant data base are helpful; the book was the culmination of the author’s lifetime of collecting this information. | [http://herb.umd.umich.edu/](http://herb.umd.umich.edu/)  
book still available in new or used conditions; price range is about $40 - $80; only in hardback edition |

Native Reflections
Box 2790 Station Main
Winnipeg, Manitoba
Canada R3C 4B4

A full-color 142 page guide has 70 foods from land and sea and 30 recipes. Each item has a photo, the commonly used name, preparation techniques and history of use, personal stories from different Alaska Native cultures, three different ways to understand a food’s nutritional value, food safety and portion sizes. Published March, 2008.

Primarily for Alaskan Native cancer survivors, but resource for all. Main authors are Christine DeCourtney, Desiree Simeon, and Karen M. Mitchell with many collaborators. Funded through Lance Armstrong Foundation with local and national healthcare organizations. Recommended by

Partner Organizations for Promoting Fruits & Vegetables

Key Partners

National Congress of American Indians – from this site, contact any tribes through a listing by geographic area and a list by first name of tribe
http://www.ncai.org/Tribal_directory.3.0.html

Association of American Indian Physicians – provide a Facts-at-a-Glance Guide to a variety of statistics for AI/AN communities, and a CD and printable version of an extensive AI/AN Diabetes Resource Guide for Health Professionals
http://www.aaip.org

Indian Health Service Service Areas – contact any of the 12 service areas – http://www.ihs.gov/

Inter Tribal Councils – variety of sites; inter tribal councils may be the best contacts for fruit and vegetable promotions among smaller tribes
Arizona – www.itcaonline.com
Choctaw Nations of Oklahoma; Five Civilized Tribes – www.fivecivilizedtribes.org/
Michigan – www.itcmi.org
Nevada – www.itcn.org
National Health-Related Partners

Centers for Disease Control and Prevention – www.cdc.gov/

Fruit and Vegetable Health Initiative – http://www.fruitsandveggiesmatter.gov/

United States Department of Agriculture – Food Distribution Programs on Indian Reservations – http://www.fns.usda.gov/fdd/programs/fdpir/ This site has a direct link to a 135 page report dated April, 2007 and titled "Obesity and American Indians/Alaskan Natives", which notes that low consumption of fruits and vegetables is one of many contributing factors related to nutrition and diet. A review of research specific to Al/AN and suggestions are included http://aspe.hhs.gov/hsp/07/AI-AN-obesity

Food Research and Action Center (http://www.frac.org) has released publications, funding updates and links that over the years have been relevant to both WIC and Inter Tribal Organizations (ITO) programs and agencies that work with Native Americans in general. This is the site to use for emergency food assistance after disasters like floods or hurricanes.

Healthy Beverages Community Action Kits – www.ihs.gov/medicalprograms/diabetes/resources/healthbev06_index.asp This site is particularly complete with both research and practical tools, including a list of internet resources with pictures that can be used to make power point presentations for a local area.

Authors of this document
This “Resource and Tip Sheet” was developed and edited by a subcommittee on Special Populations of the SRC (State, Regional and Community Interest Group) of the National Fruit and Vegetable Alliance Steering Committee. Members of the subcommittee are:
Theresa Clay, Indian Health Service in Albuquerque Area
Kathy Cobb, Centers for Disease Control and Prevention
Lynn Hellenga, Montana State University
Jamie Hineman, Idaho Department of Health
Tempa Tate, New Mexico Department of Health
Laura Tanase, Centers for Disease Control and Prevention
Marie Tymrak, Arizona Department of Health Services - chairwoman
Melva Zerkoune, Inter Tribal Council of Arizona
Many people from a variety of agencies contributed and reviewed the document, which remains an evolving resource.
